

R 19 AC Wiring Diagram

There are 4 tubes, 2 sets of 2. One set of tubes contains wires leading to the switch and wires leading to the light for the lower refrigerator compartment. The other set provides a similar arrangement for the upper compartment. A tube leading to a light may be used to install a temperature sensor directly in a refrigerator compartment. This sensor would only be needed in the unlikely event both the original mechanical thermostat and the spare sensor failed.

Refrigerator thermostat with spare temperature sensor (wound white wire inside) for use with an electronic replacement thermostat

*Transformer wire colors may vary
